EDUCATION

University of Pittsburgh

BS Computer Science (Bachelors with Honors), Economics (Minor) *GPA: 3.9*

Pittsburgh, PA

Aug 2017 - May 2021

WORK EXPERIENCE

ServiceLink

Data Scientist

Pittsburgh, PA

November 2020 - Present

- Currently working as a Data Scientist utilizing Python and Optical Character Recognition technology to extract loan information from mortgage documents.

Microsoft

Software Engineering Intern

Redmond, WA

May 2020 - July 2020

- Utilized Aspect-Oriented Programming in C# to remove up to 70% of boilerplate code within Azure SQL workflows.
- Streamlined ways to publish logging events within Azure SQL reducing the amount of time necessary to create new workflows.
- Created various protocols and measures within Azure that ensured protection of a user's private information.

Honeywell

Software Engineering Intern

Pittsburgh, PA

May 2019 - August 2019

- Developed a test automation tool in Python to automate the submittal of forms on the company website which reduced the input required for a user-generated test file by 50%.
- Implemented REST API in Python and MySQL to communicate with company lab devices in order to enhance the Javascript-based company web portal by displaying real-time device data.
- Integrated JIRA API with company web portal resulting in reduced time to find open issues with the company product.

AWARDS

Best Use of Big Data

Assembled a mobile app in React Native which gave individuals food options based upon dietary restrictions.

Pitt Challenge Hackathon

October 2019

PROJECTS

Partify Typescript, React

<https://partify-us.com/>

Worked in a team of two to build a website that used the Spotify API to scrape the data of multiple users and create a shared playlist catering to everyone's taste.

Cooki Javascript, React, Next.js

<https://cooki.now.sh/>

Created a website using Node.js and React that filtered foods based on user-supplied metrics to find tailor-made recipes.

Cryptocurrency Tracker Javascript, React, Redux

<https://crypto-track.herokuapp.com/>

Built an online application to track over 3000 cryptocurrencies through calls to the CryptoCompare API to display cryptocurrency prices in real-time.

YelpCamp - Yelp for Campsites MongoDB, Express

<https://elk75-yelp-camp.herokuapp.com/>

Created a Yelp clone hosted with Heroku that allowed users to sign in, post, and review various campsites.
